

Name: _____

Positive and Negative Integers: Multiplication

For each problem below write whether the answer will be positive or negative and find the correct answer. Remember: Two like signs will be positive. Two unlike signs will be negative.

Example: $7 \times (-3) = \underline{-21} \quad \underline{\text{negative}}$

A) $5 \times 6 = \underline{\hspace{2cm}} \quad \underline{\hspace{2cm}}$

B) $-8 \times 3 = \underline{\hspace{2cm}} \quad \underline{\hspace{2cm}}$

C) $-2 \times 18 = \underline{\hspace{2cm}} \quad \underline{\hspace{2cm}}$

D) $-4 \times (-11) = \underline{\hspace{2cm}} \quad \underline{\hspace{2cm}}$

E) $9 \times -7 = \underline{\hspace{2cm}} \quad \underline{\hspace{2cm}}$

F) $-12 \times 6 = \underline{\hspace{2cm}} \quad \underline{\hspace{2cm}}$

G) $-15 \times (-4) = \underline{\hspace{2cm}} \quad \underline{\hspace{2cm}}$

H) $-1 \times (-13) = \underline{\hspace{2cm}} \quad \underline{\hspace{2cm}}$

I) $7 \times (-8) = \underline{\hspace{2cm}} \quad \underline{\hspace{2cm}}$

J) $-16 \times (-2) = \underline{\hspace{2cm}} \quad \underline{\hspace{2cm}}$

Name: _____

Key

Positive and Negative Integers: Multiplication

For each problem below write whether the answer will be positive or negative and find the correct answer. Remember: Two like signs will be positive. Two unlike signs will be negative.

Example: $7 \times (-3) = \underline{-21} \quad \underline{\text{negative}}$

A) $5 \times 6 = \underline{30} \quad \underline{\text{positive}}$

B) $-8 \times 3 = \underline{-24} \quad \underline{\text{negative}}$

C) $-2 \times 18 = \underline{-36} \quad \underline{\text{negative}}$

D) $-4 \times (-11) = \underline{44} \quad \underline{\text{positive}}$

E) $9 \times -7 = \underline{-63} \quad \underline{\text{negative}}$

F) $-12 \times 6 = \underline{-72} \quad \underline{\text{negative}}$

G) $-15 \times (-4) = \underline{60} \quad \underline{\text{positive}}$

H) $-1 \times (-13) = \underline{13} \quad \underline{\text{positive}}$

I) $7 \times (-8) = \underline{-56} \quad \underline{\text{negative}}$

J) $-16 \times (-2) = \underline{32} \quad \underline{\text{positive}}$
